V Is for Venus Flytrap: A Plant Alphabet by Eugene Gagliano

The Venus flytrap (*Dionaea muscipula*) is a carnivorous plant native to subtropical wetlands on the East Coast of the United States in North Carolina and South Carolina. It catches its prey—chiefly insects and arachnids—with a trapping structure formed by the terminal portion of each of the plant's leaves, which is triggered by tiny hairs (called "trigger hairs" or "sensitive hairs") on ...

Venus flytrap - Wikipedia

Venus flytraps look like they could be from another world, but this carnivorous plant is right at home on your windowsill or porch. Though it has a reputation for being difficult to care for, Venus flytraps just need a little bit of extra attention and the right environment to thrive.

them in place, damaging them, or healing. As of Plants vs. Zombies 3, Venus Flytrap has appeared in three games.

Venus Flytrap | Plants vs. Zombies Wiki | Fandom

Brendan McGuigan. Last Modified Date: December 16, 2020. A Venus Flytrap is a type of plant, which is carnivorous and feeds primarily on insects and spiders. Its Latin name is *Dionaea muscipula*, and it is popular as an exotic plant for home cultivation.

What is a Venus Flytrap?

The Venus flytrap is a flowering plant best known for its carnivorous eating habits. The “trap” is made of two hinged lobes at the end of each leaf. On the inner surfaces of the lobes are hair-like projections called trichomes that cause the lobes to snap shut when prey comes in contact with them.
